

INTERIORS healthier

global

Global Furniture Group supplies a wide range of products that can help customers achieve healthy interior choices.

We are continuously working to minimize, reduce and eliminate chemicals of concern from both the manufacturing process and our final products. As a result, customers can purchase products that meet the ANSI/BIFMA e3-2019 Furniture Sustainability Standard, credit 7.4.4.

“Targeted Chemical Elimination” outlined below.

Flame retardants:

Upholstered seating meets the requirements of TB 117-2013 and are labeled accordingly.

Per and poly-fluorinated compounds:

Products do not contain long-chain, short-chain, per - and poly-fluorinated alkyl compounds or fluorinated polymers used for stain, oil, or water repellant treatment at or above 100 ppm.

Antimicrobials:

Products do not contain any added or built-in chemical antimicrobials except when added to materials or products for the sole purpose of preserving the product. Triclosan and triclocarban are explicitly prohibited for any use.

Polyvinyl chloride (PVC):

Product contains less than 1% of polyvinyl chloride (PVC) by weight, excluding electrical components.

Formaldehyde and other VOCs:

Products meet the requirements of ANSI/BIFMA M7.1 – through Greenguard Certification.

Exceptions: Product will be non-compliant if the customer specifies an upholstery that contains PVC vinyl (greater than 1% of the total product weight) or is not PFAS Free. Specification of wood arm caps/legs, or laminate tabletop/tablet arm (with PVC edging) may also produce a non-compliant option. Global has identified products and textiles that are PFAS free to help customers make informed decisions.

For clarification or assistance with specifying solutions contact your Global sales representative.

The customer is responsible for specifying upholstery/options that meets the above criteria.
