COLLABORATIVE
SOLUTIONS

At the heart of every organization are people that work closely together each and every day with a simultaneous need for proximity and personal space.

Collaboration among professionals in the workplace has become the norm rather than the exception. These people often lie at the heart of the organization developing new ideas and strategies, sharing skill sets and experiences, and dividing assignments and workloads to meet demanding deadlines. They also require sufficient personal space in this shared context to do what they do best as individuals.

Collaborative solutions achieve their efficiency by making an organization's most important asset, their people, their most productive asset. The transparency of their environment parallels a transparent methodology with their peers. Shared materials need to be at hand and work in progress between minds left undisturbed. This requires a blend of primary, secondary and tertiary worksurfaces and storage components.

Finishes shown: Panel frames and overpanel storage: Tungsten (TUN). Panel infill: Clear Maple (WM8340THP). Primary worksurfaces: Clear Maple (WM8340TLP). Secondary worksurfaces: True White (S645LP). File storage and pedestals: Tungsten (TUN). Pedestal cushion: Allante - White (A48E). M9 Seating upholstery: Momentum - Ace, Tuxedo (AC75).

Translucent sliding doors on the panel mounted storage modules reveal the contents of shared resources to both people in this collaborative layout for quick access. A generous, shared surface between each person's principle worksurface allows work in progress to remain undisturbed and visible. The tertiary surface on top of the file storage provides overflow for each individual's workflow and reference.

Engineered for the way people work, Evolve meets the challenges of today's rapidly changing workplace. Featuring a crisp and clean aesthetic, Evolve is designed to provide limitless planning possibilities for greater return on investment.

Collaborative solutions achieve their efficiency by making an organization's most important asset, their people, their most productive asset.

Evolve's panels can be stacked and switched for maximum flexibility and reconfiguration. Panels also integrate 'plug and play' connectivity at the worksurface and offer wire management to meet any power and data requirements. A range of ergonomic worksurfaces and practical storage options enable cost-effective planning. This collaborative configuration features the M9 seating series, a beautifully finished and ergonomically rich task chair.

The Evolve System is a perfect complement to the many demands of collaborative work environments offering a wide range of panel types, storage elements, worksurface configurations and finishes.

The mixed heights of the worksurfaces reflect the working priorities and also provide a visual landscape that is more open and interesting. The mobile pedestal storage is fitted with top cushions that can be pulled out to provide a 'quick sit' for a visiting co-worker. It's all about flexibility, interaction and collaboration.

Evolve offers solutions for panel mounted computer monitors that sit free of the workspace. This workstation also features a shared workspace that is supported by a two high bookshelf to complement the overhead storage and panel mounted shelf. Pedestals at each workstation complete the storage solution.

Good planning and a great product can achieve a lot in a very small amount of space without actually seeming small. This is where Evolve's broad selection of panel types and sizes, storage elements and accessories maximize your options and your available budget. Evolve offers a competitive and environmentally sustainable solution that is truly unique.

Collaborative solutions can also be compact solutions that minimize real estate and maximize productivity.

At Evolve we believe it is our responsibility to protect the environment for future generations. The growing importance of reducing energy consumption and resource sustainability continues to challenge us in this ever-changing marketplace.

Evolve's epoxy powder coating process (A) involves no liquids and is solvent free. It does not contain any harmful VOC's or lead. Up to 99% of over sprayed powder is reclaimed, mixed with virgin powder and reused. All powder that doesn't get recirculated is recycled and used to paint non-exposed parts.

Evolve has developed a panel interior made from 100% recycled wood (B) and reclaimed polypropylene (C). Through innovative design and technology, Evolve utilizes waste that would normally have been sent to a landfill.

Evolve panels are insulated with a mineral wool insulation made from slag (an inert steel product) and basalt rock. This material's high density provides maximum sound absorption to reduce noise in the work environment. Mineral fiber insulation is fire resistant, water repellent and will not support the growth of fungi or mildew.

Evolve offers fabrics that are made from 100% recycled polyester (D), which means less waste going into landfills, reduced demand for petroleum products, and fewer environmental impacts from the processing of petroleum products into polyester.

Evolve is Greenguard® certified to rigorous indoor air quality standards for low-emitting interior products and manufactured in ISO 14001 registered facilities.
