- Global is pleased to offer a range of sophisticated electrical and technology options for training and conference tables.
- Worksurface cut-outs for units must be specified separately, please see appropriate product note pages for details.
- Daisy chaining is generally defined as having multiple power units connect to one another from a single electrical infeed source.
- The daisy-chain units below utilize a 4 -wire, 2 circuit system (when hardwired by a licensed electrician to a building power source) or can run a single circuit (when utilizing the 42AP1-72 plug and play infeed).
- The following maximums are to National Electric Code (NEC) - some local codes vary from NEC code - it is the customer's responsibility to follow all applicable local codes and guidelines.

| Product | Max units per circuit |
| :--- | :--- |
| Villa I | 8 units per circuit |
| Villa II | 4 units per circuit |
| Villa USB | 8 units per circuit |
| Oasis Mini A | 3 units per circuit |
| Oasis Mini B | 3 units per circuit |

Bungee is a series of freestanding tables and accessories designed for classrooms, training rooms, boardrooms and any other multi-functional space that may require frequent configurations. Tables are sold complete with legs and Bungee cords so they may quickly and easily be connected together without searching for tools or worrying about loose parts.

Bungee tables feature rounded corners with a unique "bubble molding" that is engineered to compress under the tension of the Bungee cords. The compressed molding creates a seal that serves to locate and align interconnected tables while also providing a soft and forgiving edge.

Choose from a variety of top shapes and laminate finishes to create your individual style. In addition, most tables offer a choice of tapered legs or spider legs in a Tungsten or Black finish with adjustable levelers or optional casters. Optional modesty panels, grommets, wire management and power blocks further enhance your workspace.

Flip-Top tables can be nested and easily stored by activating the single hand release mechanism from the left or right side.

Optional locking casters are available in Tungsten or Black (standard on Flip-Top models).

## MODPOWER DAISY CHAIN SOLUTION

- Add flexible power and USB charging to Bungee SL rectangular tables. Connect up to four units with a single corded infeed with NEMA plug.
- ModPower units are sold separately, refer to Productivity Solutions page 465.
- Begin run with a starter unit which includes a corded infeed. Add additional middle or end units as required. Middle and end units are equipped with connecting cables.
- On-surface modules clamp on or screw mount to the table tops.
- In-surface modules require table top cut-outs for mounting. Specify cut-out option: MPS for a single cut-out to accommodate one ModPower in-surface unit (cut-out will be centered on the approach side) for $\mathbf{4 2 "}$ to $\mathbf{7 2 "}$ wide rectangular tables. Add $\$ 96$ MPD for two cut-outs in the left and right positions, $18.25^{\prime \prime}$ from ends to center of unit on approach side for $\mathbf{6 0}{ }^{\prime \prime}, \mathbf{6 6 "}$ and $\mathbf{7 2 "}$ wide rectangular tables. Add $\$ \mathbf{1 9 2}$.

- Casters can facilitate mobility in installations which need to be moved frequently.

## MODPOWER DAISY CHAIN SOLUTION

- Add flexible power and USB charging to ConnecTables rectangular tables. Connect up to four units with a single corded infeed with NEMA plug.
- ModPower units are sold separately, refer to Productivity Solutions page 465.
- Begin run with a starter unit which includes a corded infeed. Add additional middle or end units as required. Middle and end units are equipped with connecting cables.
- On-surface modules clamp on or screw mount to the table tops.
- In-surface modules require table top cut-outs for mounting. Specify cut-out option: MPS for a single cut-out to accommodate one ModPower in-surface unit (cut-out will be centered on the approach side) for $\mathbf{3 0 "}$ to $\mathbf{7 2 "}$ wide rectangular tables. Add $\$ 96$ MPD for two cut-outs in the left and right positions, 18.25" from ends to center of unit on approach side for $\mathbf{6 0} \mathbf{0}, \mathbf{6 6 "}$ and $\mathbf{7 2 "}$ wide rectangular tables. Add $\mathbf{\$ 1 9 2}$.

## VILLA CUTOUTS

- Optional Villa cutout available in standard worksurface locations (left, center or right) for Rectangular Tables. Order as: V1, V2 or V3 - Add $\$ 96$ for each cutout.
- Villa cutouts may be placed at non-standard locations. Please contact customer care.

## TOP \& EDGE OPTIONS

- ConnecTABLES® have nine basic top shapes available in various sizes. All top shapes have a variety of straight or curved edges which are referred to as Working (W), Connecting (C) or End (E) edges. Edges can also have a combination of edge types as shown.
*cannot freestand

Quarter Round*

$45^{\circ}$ Wedge*

Square

$60^{\circ}$ Triangle*

Trapezoid

$90^{\circ}$ Crescent

Half Round

Extended Half Round*

Working Edge (1) - Edges designated with the letter "W" indicate that this is a working or sitting edge. These edges can be connected with optional ganging hardware in free-standing applications.

Connecting Edge (2) - Edges designated with the letter "C" indicate that this is a connecting edge. These edges can be connected to any other connecting edge of equal width, regardless of the top shape or size.

End Edge (3) - Edges designated with the letter " $\mathbf{E}$ " indicate that this is an end edge or an edge that can finish a run of tops. If a top has two end edges it can be freestanding. $90^{\circ}$ crescent tops can be freestanding if the optional center leg is added.

## FREESTANDING AND CONNECTING CONDITIONS

Freestanding tables are defined as any one worksurface supported by two or more legs; connecting tables are defined as more than one work surface supported by a single leg at each point of connection. The rule for determining the quantity of legs of an open configuration is the number of worksurfaces plus one (See Figure 1).

On closed configurations, the number of legs is equal to the number of worksurfaces (See Figure 2). There are some exceptions, such as when optional third legs are used on quarter round or $90^{\circ}$ crescent shapes.

Figure 1. Open Configuration
Number of Surfaces $=5$ Number of Legs $=6$

Figure 2. Closed Configuration Number of Surfaces $=6$ Number of Legs $=6$

- All square, rectangle and trapezoid shapes are able to act as freestanding tables (Figure 3).
- When Trapezoid tops are freestanding, legs must be on the outer left and right sides (Figure 4).
- $90^{\circ}$ crescent work surfaces have provision for an optional third center leg for additional stability when heavy loads are applied to the outside edge.
They can also be used as freestanding tables when a third leg is added (Figure 5).
- All freestanding tables can be connected with optional ganging hardware.
- Freestanding tables can be ganged with connected tables in some cases, providing that the number and size of connected tables is easily movable (Figure 6).

## CONNECTING CONDITIONS

- Any two worksurfaces of equal depth ( $24^{\prime \prime} \mathrm{D}, 30^{\prime \prime} \mathrm{D}$ or $36^{\prime \prime} \mathrm{D}$ ) can be connected with one leg, at the connecting or end edges (Figure 8).
- Half round work surfaces can be used in the following ways: They must be of equal width when connected to each other (Figure 7) or the connecting shapes must be equal to half the width of the connecting half round (Figure 8).
- ConnecTABLES ${ }^{\circledR}$ is designed with the leg to be fastened parallel to connecting edges, but in some cases you may wish to fasten legs at $90^{\circ}$ to connecting edges. This could allow for increased leg or knee clearance, depending on the intended use (Figure 9).
- Quarter round and $90^{\circ}$ crescent work surfaces have provision for an optional third leg for additional stability when heavy loads are applied to the outside edge. For quarter round work surfaces, it is recommended that configuration " A " be used since the outside end of the center leg in configuration " B " is almost flush with the outside edge of the worksurface. If configuration " B " is installed against a wall or where there will be no traffic flow, then configuration " B " can be used.

Figure 7

Configuration A

Figure 8

## Configuration B

Legs are fastened to worksurfaces utilizing a steel-to-steel connection. Each leg comes equipped with four $1 / 4^{\prime \prime} \times 7 / 8^{\prime \prime}$ machine screws. Screws are inserted through the four oval shaped holes only. Do not use wood screws! When fastening legs to work surfaces, hand thread screws into position to prevent any cross threading. When all screws have been hand threaded, tighten firmly with screwdriver to secure. Optional thumbscrews can be used in place of machine screws. Thumbscrews eliminate the need for a screwdriver, whether assembling or disassembling tables. Do not use power tools for assembly of legs.

## FREESTANDING TABLES

1. Turn work surface upside-down on clean floor. (You may want to use carton from packaging as a protective assembly surface to protect the top from scratching.)
2. Position leg mounting plate holes over threaded steel inserts in top.
3. Fasten each leg to top with four $1 / 4^{\prime \prime} \times 7 / 8^{\prime \prime}$ screws.
4. Turn table right-side up.
5. Level table by adjusting glides.

## CONNECTING TABLES

1. Determine approximate location of desired configuration in room and turn work surfaces upside-down on floor. (Remember you are working in reverse.)
2. Position leg mounting plate so it is centered over the connecting edge of the first work surface. Fasten leg with two $1 / 4^{\prime \prime} \times 7 / 8^{\prime \prime}$ screws.
3. Repeat step 2 and 3 on the opposite edge of the first work surface.
4. Turn table right-side up.
5. Turn table right-side up and fasten to the previous top from the underside.
6. To add additional work surfaces repeat step 6.
7. When all the tops have been connected, level complete configuration by adjusting glides.

Note: Use the same procedures as above when using optional thumb screws.

## OPTIONAL CASTERS

1. Turn work surface upside-down on floor.
2. Remove existing glide if previously installed.
3. Fasten caster to T-leg by threading caster stem into base of T-leg and secure by tightening lock nut.
4. If casters are used in combination with gliders, level table by adjusting glides.

Note: Casters are available in locking or non-locking styles.

## OPTIONAL GANGING HARDWARE

1. Optional ganging hardware should be used when quick and frequent reconfigurations are required.
2. Turn work surfaces to be ganged upside-down on floor.
3. Remove ganging hardware from package. Holes with steel inserts are located in the corner of tops.
4. Fasten ganging hardware to each work surface with supplied thumb screws.
5. Projected arm from ganging hardware can pivot out of the way when not in use.

Tall storage cabinet's legs provide easy access to the Cable Basket where it can easily be unclipped from spring steel brackets to rearrange cable connections. Steel wire construction, chrome finish baskets; black spring steel hanging brackets, fasteners.
